Bluetooth information

Bluetooth is the new standard for wireless short-distance radio communications. It facilitates connectivity between communicating devices such as mobile phones, PDAs and computers. The Bluetooth specification is constantly being reviewed and updated. The current most used version of the spec is v1.1. For more details, see www.bluetooth.com

A lithium ion (li-ion) battery is a rechargeable battery with twice the energy capacity of a nickel Cadmium battery and greater stability and safety. The headset does not pick up disturbing sounds from background, so people on the other line will only hear you talking.
