

RadiationShield 1050/1051

Blocks possible harmful radiation from your mobile phone.

- > blocks electromagnetic waves coming from behind the shield and emitted by your mobile phone
- > conductive fibers used are developed by NASA for protection of space equipment
- > high exposure and easy to customise
- > excellent mailing item

Customised

Print area	Text max. 3 mm high (on edge of shield)
Print method	Silk screen
Colours	Silver - gold - black
Packaging + dimension	Each shield on an instruction card packed in a Polybag 117 x 72 mm
Weight product	Approx. 1 gr
Weight product incl. packaging	2 gr
Customized options	Edge in customised colour and/or shape

Specifications Shieldron

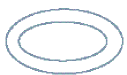

The RadiationShield is made of Shieldron. According to the ASTM D4935-39 (American Standard of Testing Method), Shieldron can block electromagnetic waves. For instance in the year 2000 Concurrent Technologies Corporation (CTC.com) tested Shieldron and proved the effectiveness of it.

Note

The radiation shield only blocks 90 - 99% of the radiation which comes from behind the shield. Radiation coming from other parts of the phone or environment will not be blocked.

Available shapes

1050

Oval

1051

Rectangular
